

TOBACCO ENGINEERING

BENEFITS

- Designed to meet customer Plant layout requirements
- Stainless steel rigid construction
- Simple operation / maintenance
- Fully adjustable boot area to prevent spillage & contamination

LTL AUTOFEED

THE SOLUTION FOR DELIVERING YOUR TOBACCO FLOW CONTROL REQUIREMENTS

The LTL Group are designers and manufacturers of bespoke process equipment for the world tobacco industries.

The LTL Autofeed provides a method of regulating an intermittent flow of product, provides a buffer storage capacity and increases height in a relatively small space to assist with plant layout restrictions

The rising band is fitted with lifting tines designed specifically for the type of product being conveyed. The belt is surmounted with an adjustable rotary refuser to regulate the product carpet depth.

The LTL design allows for the mounting of the roll point photocell at a very low level to keep the roll as small as possible thus reducing product degradation.
